

KOLEKCJA ODZIEŻY MOTOCYLKOWEJ MACNA 2015

MACNA 

MATERIALS

Superfabric

High performance material with abrasion resistance, does not compress with load and abrasion resistance.

Summer Comfort System

Detachable collar from panel on wings large mesh panel for ventilation.

Suspenders

A built-in preparation to attach optional suspenders.

Thermo Liner

Insulating detachable liner to keep warm.

TPR

Thermoplastic Polyurethane Rubber, 3D parts used for reinforcement and structural details.

Twin Shell

Jet entry - out with a waterproof direct laminated outer shell and a protective leather core jacket.

Prepared preparation for mounting a Vision Mobility Vest.

Waist-Lock

A strong holder, fixed with a lock, holds a special strap in place. Much stronger than traditional metal buckle, and a lot easier to use.

WP-Connect

With this special layer construction at the inside of the jacket you can connect the jacket to your gear with a thin or long connection strap to swing it out or in, to remove when using your jacket has at this moment.

C-touch

Polyester 600 with medium abrasion resistant, cotton felt and feeling.

Leather, cow embossed

Cow leather with easy to clean embossed upper.

Durylon

Polyester with Polyester with high abrasion resistance.

Dynax

Polyester 600 with high abrasion resistance.

Dynamic

Strong mesh textile.

Poly 500

Polyester 500 with medium abrasion resistance.

Poly 600

Polyester 600 with medium abrasion resistance.

R-touch

Polyester 600 with medium-high abrasion resistance.

Raintex

Waterproof and breathable membrane (5000mm/500g).

Raintex DL

Waterproof and breathable membrane (laminated to leather shell fabric) (10000mm/500g).

Raintex plus

Waterproof and breathable membrane (10000mm/500g).

Spacotec / 3D mesh

Retired 3 dimensional mesh.

Superfabric

Extremely abrasion resistant high performance.

Night Eye

100% HighVis Yellow with reflective pattern 2 Dark, Mid Gray, all are reflective.

MACNA 

Systemy protekcji

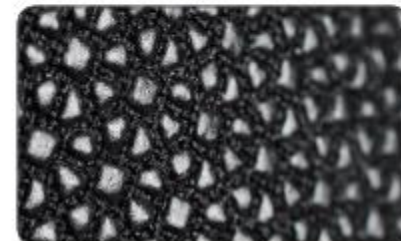

External hard shell protectors placed at the impact sensitive part of the shoulder.

They add a substantial amount of safety by covering the shoulder seam, but these injection moulded parts also reduce friction with the road and spread the force of the impact during an accident.

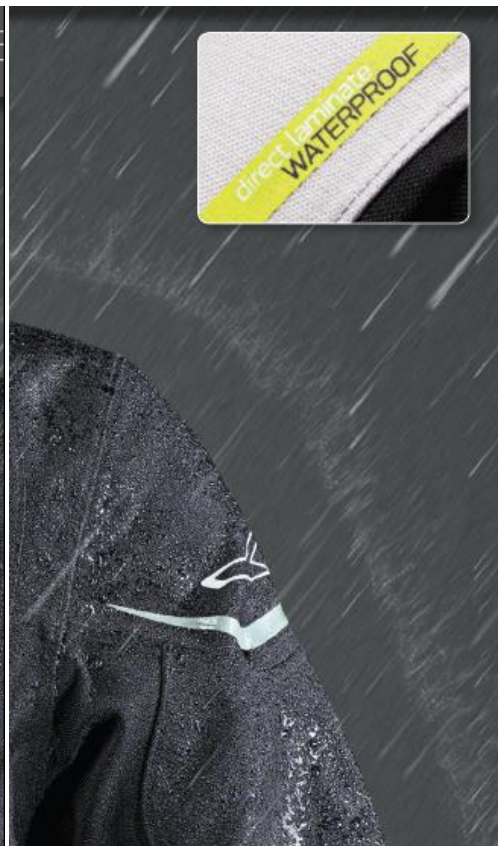

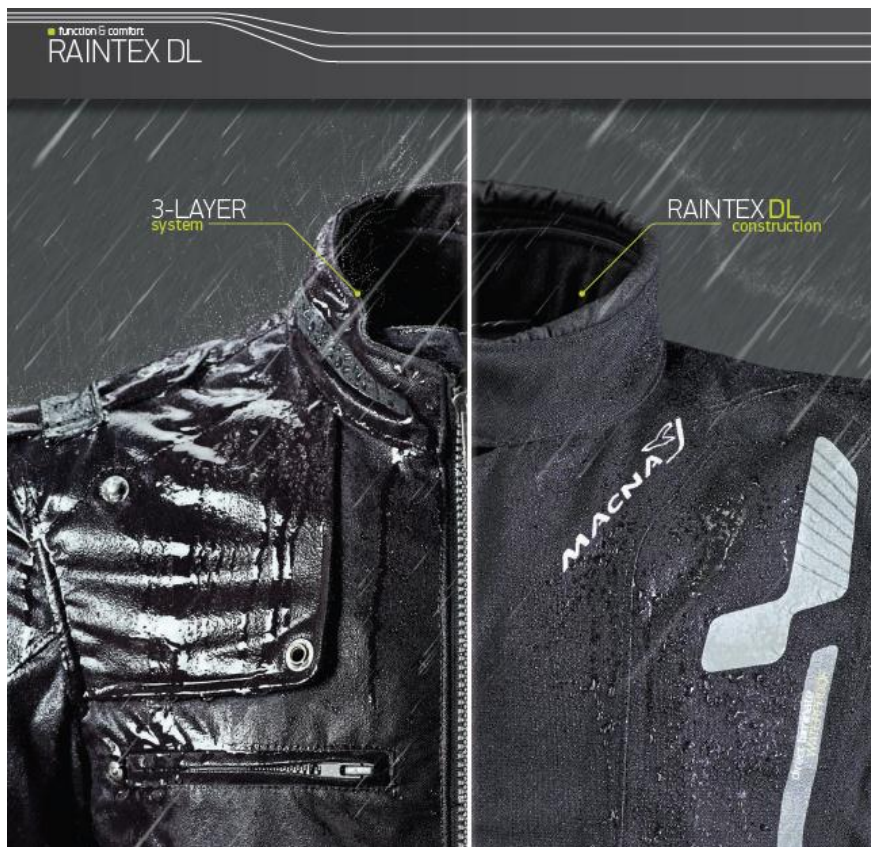

A high performance textile with a very high abrasion resistance.

The special print gives it an abrasion resistance, exceeding the values of leathers. Because water is not absorbed it remains lightweight at all times. It makes this fabric highly suitable for reinforcements on all-weather textile products.

Wodoodporność

Light and dry?

RainTex DL will keep water out. Not just away from your shirt but completely outside the jacket. The breathable waterproof layer is laminated directly to the outer shell, leaving no space in between these layers to store water. Because only the outer shell will get wet, the jacket will dry fast and breathability remains intact.

Conventional systems absorb water. It will hit through the non waterproof outer shell and only get blocked by the waterproof layer inside. Water will get trapped in between layers, behind plastic protectors, soak your liner..... your jacket will end up soaked. Long drying times, weight increase and a musty smell the next morning are the results. Water in between layers will form a film blocking the membranes breathability. You will also feel water running down the membrane on the inside of a conventional system, it works like your bike's liquid cooling.

- A - rain
- B - outer shell
- C - membrane
- D - absorbed water

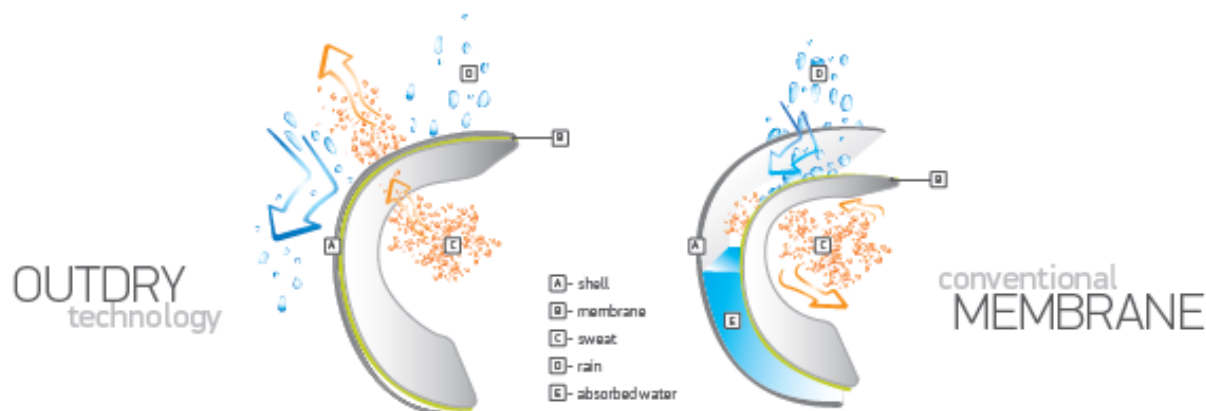

OutDry; The revolution in performance and comfort of waterproof breathable gloves

OutDry is the innovative Italian technology for waterproof gloves where the standard manufacturing techniques based on seam-sealed waterproof fabrics cannot be utilized.

Thanks to the OutDry patented lamination process, the waterproof/breathable membrane is directly bonded to the external layer of the glove, perfectly sealing any possible water entry point.

OutDry consistently improves finished items performance and comfort, especially if compared with the standard waterproofing system: a free 'floating' membrane (or combined with the lining), so called 'insert' in gloves, but always separated from the external layer.

OutDry takes concrete advantages in terms of waterproofness and comfort:

- The external layer and the membrane are one unique body: no more space in between;
- Water penetration is blocked without any weight increase in wet conditions;
- The membrane has a very high capacity of water vapor permeability;
- There is no seam sealing tape, enabling to exploit 100% of the membrane breathable surface;
- Keep a large volume of dry air between the skin and the membrane, reducing the risk of dew condensation.

System regulacji kołnierza

System mocowania membran

Loose layers in your sleeve stick to your watch or are just a big mess. Easy Cuff creates a nice and tidy sleeve.

Waterproof up to the rim, and easy to access whenever you're quickly changing the jackets' set up. With the connection between detachable membrane and outer shell placed at the outside, accessing it is simple. Forget annoying loops and snaps pressing into your arms' skin, get rid of the mess in your sleeves hooking to your watch and switch to easy cuff.

System regulacji mankietów

function & comfort
SP CUFF

Having trouble closing the second cuff after you already put on your gloves?

No need to fold the cuff with complex moves in a very specific way, almost getting cramps in your fingers, the Single pull cuff finds its own way just by pulling the strap.

■ function & comfort

CLICK PULLER

OPEN

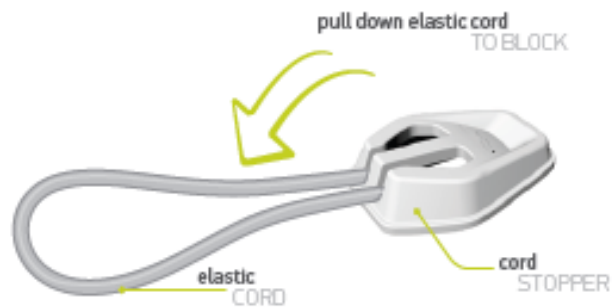

Large handle without flapping.

After closing the jacket the zip handle can be locked into a fixed position so it does not hang loose, no need for an additional flap to keep the puller in place. Eliminates flapping and vibrations.

CLOSED

Nowy system regulacji

Tighten the bottom of your jacket just by pulling the cord. Pulling it in one way will set the cord free to move, pulling it in the other direction will lock it in place. No moving or loose hanging parts, just a smart shape integrated in the jacket's rim.

WIDOCZNOŚĆ

Instant visibility.

With its bright neon colour and large reflective parts it will boost your visibility day and night! The vest can be fixed onto the jacket through two integrated buckles and a built in zipper and can remain onto the jacket at all times. The Vision vest does not interfere with the jackets' functionality.

LED LIGHT PREPARED visibility

Light up your back with the optional LED light.

The high position of this bright light improve your visibility. With it's 5 powerfull LED's it can be used for up to 3 hours continuous or 6 hours in flash modus. Charging is simply done by connecting the USB cable to charger or even computer.

bright^{AT} NIGHT!

The next step in visibility at night.

Tiny glass beads on the NightEye fabric work as small satellite dishes. These tiny mirrors will reflect the light right back where it came from and make you light up in a car's headlights from a long distance. There are two versions available. Night Eye Classic has a pattern on top of neon yellow fabric. During daytime the high viz yellow does the job, at night the pattern lights up. The latest version, Night Eye Dark, seems common mid grey textile at daytime, but completely lights up at night. If you don't like to ride around like a roadworker you can have a fashionable looking jacket with even more visibility at night.

Cena detaliczna brutto 399,00 zł

2-layer system

Jacket or pants have a fixed waterproof layer and detachable thermo liner.

3-layer system

Jacket or pants have a separately detachable waterproof layer and thermo liner.

30 degree buckle

The wrist strap buckle is placed under a 30° angle.

Airvents & panels

These zippers will, once opened, reveal a mesh air intake. Or various types of panels which can be folded away, uncovering a mesh panel.

Arm adjustment straps

Width adjustment on the arms to keep the elbow protector in place.

Backpocket

Large storage pocket at the lower back of the jacket.

CC1

Integrated collar with the summer collar hidden underneath the waterproof collar. Smooth and clean looking solution.

CE protection

Protectors applying to the EN-1621-2 regulations.

Click Puller

Large zipper puller which can be snapped in place to reduce the flapping.

Coat hanger

Externally placed strong bolt-on plastic hook to hang your coat.

Comfix

The pre-curved shape and perfect adjustability of the Comfix will make closing simple and flexible.

Connection zippers

A short or long connection zipper enables you to have a safe and wind tight connection between jacket and pants.

Direct lamination

The waterproof layer and outer shell material are bonded together and appear as one layer.

Easy cuff

Unique Macna solution keeping the sleeve entrance smooth and free of loose parts, by placing the connection on the outside of the sleeve.

EN471

European standard for professional high-visibility workwear.

EN1150

European standard for non-professional high-visibility wear.

Ergothumb

Single part for the forefinger sidewall and thumb.

Flexibelt® 2.0

A double layer waist adjustment solution. The outer part can slide freely over the inner stretch part. The stretch inside follows the waist, the outer part with straps fixes it all together.

Anti slip strips

The printed or welded sticky pattern will keep you in place on your seat.

Heatshield

Textile or leather panels at the bottom of the leg, placed towards the motorcycle, which prevent the pants of melting when touching exhaust pipe or other heat sources.

Isosfur

Fur like material with perfect insulating properties and comfortable feeling.

Lamination

Thermal bonding of two materials.

Laser cutting

Cutting of textile panels with a laser beam.

Laser etched

Etching leather or other materials with a laser beam.

Led light

Small LED light which can be attached to the Veltro preparation at the back, just below the collar.

Membrane

Waterproof and breathable material layer.

Night Eye

A textile fabric with a high tech print. The microscopic glass beads in this print work as small mirrors, reflecting light right back where it came from.

OutDry

Direct lamination technology for gloves without need for seam sealing.

Pisciform

A external hard shell part, which works as a sliding or force dividing protector. It especially protects the pisiform bone and it's surroundings.

Quick pocket®

Knee protector pockets with possibility to personalize the protectors position.

Reflective

Light reflecting material, only lights up when light is pointed at it.

R.I.S.C.

Injection moulded external protective parts placed on impact sensitive areas.

Sas-tec CE protectors

Protectors of high quality applying to the EN-1621-1 regulations.

Screencleaner

Visor cleaner integrated in the finger or thumb of the glove.

Sensigrip

Bonded lining-shell construction in gloves.

Side Eye

Laminated reflective parts at the front and back upper parts of the jacket, with the emphasis on the side.

SP Cuff

Cuff strap that slides the cuff together with a single action.

3D mesh

Revised 3 dimensional mesh.
